Question No. 1

Universal Containers sells physical gift cards for the holidays.

What needs to occur to guarantee the cards will always be available?

- **A.** Create an inventory record with an unlimited Allocation value.
- **B.** Create an inventory record with an extremely high Allocation value (i.e., 1 billion certificates).
- **C.** Create a perpetual inventory record.
- **D.** Create an inventory record with Backorder Handling enabled.

Answer: D

Question No. 2

Universal Containers wants to associate a region code value with an order to indicate the general area of its destination. This region code must be accessible whenever the order history is displayed.

What is required to accomplish this?

- **A.** Store the region code value in a session variable.
- **B.** Define a custom attribute on the Order system object type to store the region code value.
- **C.** Define a custom object type to store the username with the region code.
- **D.** Store the region code value in the geolocation system attribute of the Order.

Answer: B

Question No. 3

A Digital Developer is requesting product information for an external integration. The following Open Commerce API (OCAPI) request is NOT functioning correctly:

```
POST /dw/shop/v18_3/products/(creative-zen-v,namco-we-ski-wii)?client_id=aaaa...
HTTP/1.1 Host: example.com
```

How should the Developer change the request?

- **A.** Change the URI to /dw/shop/v18_3/products/creative-zen-v.
- **B.** Change the HTTP method to PUT.
- **C.** Change the HTTP method to GET.
- **D.** Include an authentication token in the request.

Answer: C

Question No. 4

A Digital Developer has been given a requirement to add fault tolerance to an existing web service integration that uses Service Framework. Administrators at Universal Containers need to be able to configure the timeout and rate limiting.

Which approach should the Developer use to implement the requirement?

- **A.** Implement a ServiceUnavailableException exception handler to execute fallback code.
- **B.** Implement a condition that checks to see if the response was empty and execute fallback code if true.
- **C.** Create a site preference to store timeout settings and implement an IOException handler to execute fallback code.
- **D.** Use the setTimeout method to execute fallback code if the request has NOT completed.

Answer: A

Question No. 5

There are three logging categories: category1, category1.eu, and category1.us.

In Business Manager, category1 is enabled for WARN level and no other categories are configured. All custom log targets are enabled.

The code segment below executes.

```
var logger = Logger.getLogger("loggerFile","category1.eu" );
logger.warn("This is a log message");
```

What is the result'

- **A.** Logs will not be written.
- **B.** Logs will be written to the log file with a prefix loggerFile.
- **C.** Logs will be written to the log file with a prefix custom-loggerFile.
- **D.** Logs will be written to the log file with a prefix customwarn.

Answer: C
